## About

I am an aspiring Software Development Engineer with a strong foundation in Data Structures and Algorithms and a passion for problem solving. I continuously improve my coding skills through hands-on practice and real-world challenges. I also have knowledge of UI/UX design and JDBC for database connectivity. I am eager to contribute, learn, and grow while building scalable and impactful software solutions.

## Education

**Karpagam Institute of Technology** 2023 - 2027
*Bachelor of Technology - Artificial Intelligence and Data Science, (7.96)*

## Skills

**Languages**: Python, PHP, Java, MySQL, JavaScript, HTML, CSS
**Frameworks & Libraries**: Matplotlib, Scikit-learn, React.js, Pandas, NumPy, Seaborn
**Tools**: MongoDB, Power BI, AWS, Azure, Tableau, OpenAI, VS Code, Cursor, Figma, Canva
**Operating Systems**: Windows, macOS
**Concepts**: Object-Oriented Programming (OOPs), Computer Networks, DBMS, Data Structures & Algorithms, Data Warehousing, Data Visualization
**Soft Skills**: Self-Introspection, Leadership, Teamwork, Problem-Solving, Interpersonal Communication

## Projects

**Lift – Community-Driven Ride Sharing Platform**: **(Under Development)**

- Currently building a backend in **Node.js** to power a community-first ride-sharing ecosystem.
- Developing APIs for **ride matching, gender-prioritized suggestions, and liking system** to replace traditional ratings.
- Implementing **payment architecture** - where buddies contribute 5 per ride to Lift Trust, ensuring transparency and community growth.
- Working on **emergency safety flows, donation system, and real-time tracking** with shared backend services.

**Foodzy – Built for cravings**: **(2 Months)**

- Built a full-stack **online food delivery app** with separate experiences for customers and restaurants, from landing page to secure authentication and dashboards.
- For customers, implemented flows to **register/login, browse restaurants and menus, manage a cart, place cash-on-delivery orders, and track order status** in real time.
- For restaurants, created a management dashboard to **register/login, manage menu items (CRUD with images), view incoming orders, and update order status through each stage (placed → preparing → on the way → delivered)**.
- Tech stack: React 18 with React Router and Axios on the frontend, Spring Boot 3 with Spring Security, Spring Data JPA, JWT-based auth, and MySQL/H2 database on the backend.

## Certifications

**Microsoft Azure**: AZ-900 (Azure Fundamentals)
**NPTEL**: Data Structures and Algorithms using Java
**AWS Certified Cloud Practitioner**: Amazon Web Services
**Docker Essentials**: IBM / Coursera
**CISCO**: IT Support Essentials
**CISCO**: Network Technician

## Co-Curricular

**Skill Nation**: Developed a **real-time Excel data dashboard** with Power BI.

**Jobaaj Learnings**: Attended a **data analytics workshop** (Excel, SQL, Power BI) and explored **product management fundamentals**.

**ICLTSET '24 Conference**: Participated in the **10th International Conference on Latest Trends in Science, Engineering & Technology**, Karpagam Institute of Technology.
