LinkedIn Post Scheduler — Output Report

Agent: LinkedIn Post Scheduler | Department: MARKETING | Step: Generate optimized LinkedIn post using AI | Generated: 20/3/20

Classification Results

Outcome for Step 2 - CLASSIFY using LLM

Status: Failed to proceed due to missing configuration in Google Sheets.

Required Data:
To generate an optimized LinkedIn post using AI, the following data is needed:

1. **Google Sheets Configuration**: The Google Sheets account must be configured and linked with our system.
2. **LinkedIn Post Content**: A draft of the post content, including text and any necessary media attachments (e.g., images, videos).
3. **Target Audience**: Information about the target audience for the post, such as demographics, interests, or job titles.

Next Steps:

1. Configure Google Sheets in our system to enable data retrieval.
2. Provide the draft post content and necessary media attachments.
3. Share information about the target audience for the post.

Once these requirements are met, we can proceed with generating an optimized LinkedIn post using AI.
