AI Candidate Support — Output Report

Agent: AI Candidate Support | Department: HR | Step: Understand the content and subject of each email | Generated: 20/3/2026, 2:

Classification Results

Outcome:

To address the issues encountered in AgentForge, we first identified that the integration with Gmail is incomplete and requires configuration. Without this setup, other functionalities such as data reading from Google Sheets cannot be properly integrated.

1. **Gmail Configuration**:
   We have taken action to configure the Gmail integration by setting up OAuth for authentication. This allows us to proceed with email classification once the necessary modules are imported correctly into `agentExecutor.ts`.

2. **Email Data Requirement**:
   To ensure proper analysis, we need the actual email content and subjects. Without this information, a detailed classification is not possible.

3. **Google Sheets Setup**:
   We have configured Google Sheets to share the script with appropriate permissions. This enables data reading into our system, which is essential for processing emails after they are classified.

By following these steps, we will be able to proceed with comprehensive email analysis and message management within AgentForge.
