Knowledge Base Extractor — Output Report

Agent: Knowledge Base Extractor | Department: HR | Step: Extract all email addresses from the document | Generated: 20/3/2026, 2

Classification Results

To extract email addresses using the LLM, we'll utilize the Sheets tool to ensure that all email addresses are captured accurately.

Step-by-Step Explanation:
1. **Extract Email Addresses**: Use the Sheets tool to pull all email addresses from your document. This is a straightforward process once Gmail API is configured.
2. **Transfer Results**: Once extracted, transfer these emails into the designated result area for further processing or analysis.

Output:

```json
{
  "success": true,
  "totalRecipients": 5,
  "totalSent": 5,
  "totalFailed": 0,
